

Fascia Shim

The Fascia Shim is used with 5" K style gutters with sloping face boards or rafter ends that are not perpendicular to the ground.

The Fascia Shim can be used with the following gutter hangers:

Hidden Hanger w/Screw

Hidden Hanger

Spike & Ferrule

Screw & Ferrule

Use a Fascia Shim with each hanger, maximum spacing 24" centers.

Adjusting the Fascia Shim to the roof pitch.

Use as shipped for roof with 8/12 pitch. Cut at marks for 6/12 and 4/12 pitches (see diagram below). If unsure of the roof pitch place a small level or plumb bob against the top of the face board, when plumb, measure the distance from the bottom of the face board to the string or level. This distance will be the width of the bottom of the shim, mark the angle to the top of the shim and cut with tin snips (see diagram below). Clip the Shim over the back of the gutter and install with hangers.
